The invention relates to a human G protein-coupled receptor (GPCR)
appearing as ABU92259-ABU92277 (encoded by CDNAs ACA93256-ACA92247) named
hARE-3, hARE-4, hARE-5, hRUP3, hRUP6, hRUP7, hGPCR27, hARE-1, hARE
-2, hPPR1, hC2A, hCHN3, hCHN8, hCHN8, hCHN9, hCHN10 and hRUF4.
Also included are a plasmid comprising a vector and one of the CDNAs
bove and a host cell comprising the plasmid. The GPCRs are useful for
the direct identification of candidate compounds as inverse agonists,
agonists or partial agonists. In vitro and in vivo systems incorporating
CPCRs is useful for elucidating and understanding the roles these
receptors play in the human condition, both normal and diseased, as well
as understanding the role of constitutive activation as it applies to
understanding the signalling cascade. The CDNAs are useful for making a
probe for dot-blot analysis against tissue mRNA and/or RT-PCR
identification of the expression of the receptor in tissue samples. The
present sequence is a CDNA encoding a GPCR of the invention 120 180 120 9 9 Novel endogenous, orphan, human G protein-coupled receptors useful for identification of modulators of the receptor and as research tools for understanding the role of the receptor in human body. 61 TTAATGTCCCTGCTTGCTATAACGATAGGCAATGCTGTGGTCATTTAGCCTTT 61 TITATGTCCTTAGTAGCTTTTGCTATAATGCTAGGAAATGCTTTGGTCATTTTAGCTTTT 1 ATGTCGGAGTCTAACGGCACTGACGTCTTGCCACTGACTCCTCAAGTCCCCTTGGCATTT <u> Argecagaractrarecarterentina de la argenativa de la argenativa de la receptado de la compositiva della compositiva del</u> Gaps 6 56.9%; Score 669; DB 8; Length 1173; 74.2%; Pred. The present invention provides novel human G protein-coupled receptor (GPCR) proteins and their encoding nucleic acids. The invention is useful for making a probe for dot-blot analysis and for RT-PCR identification of the expression of the receptor in tissue samples. The invention is also useful for identifying candidate compounds as inverse agonists, agonists or partial agonists and as research tools in determining the location of the receptors within the body. The present sequence is human orphan G
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New cDNA encoding a human G protein coupled receptor, useful for making probe for dot-blot analysis against tissue-mRNA, and/or for RT-PCR identification of the expression of the receptor in tissue samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gape
                                                                                         88
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ó

```
The invention relates to an isolated G-protein coupled receptor polypeptide, AXOR35, (and its homologues and variants) and its encoding polypuclectide (and its homologues, variants, complements and RNA equivalents). Also included are an anti-AXOR35 antibody, an AXOR35 expression vector, producing a recombinant host cell by introducing the vector into a cell such that the host cell by introducing the the host cell expressing AXOR35, identifying/screening for agonists or antagonists of AXOR35 and inhibiting or promoting the function of lymphocytes, macrophages, eosinophils, or neutrophils in diseased tissue, by administering to the patient AXOR35 and sonists or antagonists. The agonist or antagonist identified is useful for treating a disease such as asthma, or for inhibiting or promoting the function of lymphocytes,
                                                                                                                                                                                                                                                                                 macrophage; eosinophil; neutrophil; infection; transplant rejection; gastrointestinal disorder; gastric ulcer; inflammatory bowel disease; from a disease; irritable bowel syndrome; vomiting; inflammation; atopic dermatitis; allergy; autoimmune disorder; rheumatoid arthritis; psoriasis; urcological disease; urinary retention; cardiovascular disease; myocardial infarction; hypotension; hypertension; pulmonary disorder; renal ischaemia; arteriosclerosis; atherosclerosis; psychosis; neurological disorder; migraine; anorexia; anxiety; schizophrenia; dyskinesia; Parkinson's disease; cancer; obesity; stroke; septic shock;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel isolated G-protein coupled receptor polypeptide, AXOR35, useful for treating infections, gastrointestinal disorders, autoimmune disorders, urological diseases, cardiovascular diseases and cancer.
                                                                                                                                                                                                                                                                       Human; ss; gene; G-protein coupled receptor; AXOR35; lymphocyte;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           원
macrophages, eosinophils, or neutrophils in diseased tissue such as an asthmatic lung. AXOR35 or polynucleotide is useful in disgnostic assays, for identifying compounds that are agonists or antagonists of AXOR35, as vaccines, or for treating infections (bacterial, fungal, protozoan or viral infections), transplant rejection, gastrointestinal disorders (such as gastric ulcer), inflammatory bowel diseases (such as croin's disease), irritable bowel syndome, vomiting, inflammation (such as atopic dermatitis), allergy, autoimmune disorders (such as rheumatoid arthritis, psoriasis), urological diseases (such as urinary retention), protoension, pulmonary diseases (such as schonic obstructive pulmonary disease), cough, renal diseases (such as charing obstructive pulmonary disease), cough, renal diseases (such as renal ischaemia), artherosclarosis, atherosclarosis, psychotic and neurological disorders (such as migralne, anorexia, anxiety, schizophrenia), dyskinesias (such as Parkinson's disease), cancer, obesity, stroke, septic shock, graft versus host disease and osteoporosis. The present sequence is the cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         480
                                                                                                                                                                                                                                              The present invention relates to human endogenous orphan G protein-coupled receptor (GPCR) proteins and polynucleotides encoding such proteins. The cDNA sequence of the human G protein-coupled receptor (GPCR) is useful in making a probe for dot-blot analysis against tissuemRNA and/or for RT-PCR identification of the expression of the receptor in tissue samples. GPCR sequences of the invention may be used in disease/disorder identification and/or selection, in screening of candidate compounds for use as pharmaceutical agents and in research settings. The present sequence is human endogenous orphan GPCR cDNA.

                                                                                                                                                                                                       On Nov 15, 2002 this sequence version replaced gi:23812823. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 236694;

Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Sesarch Center (DKPZ); Email s.wiemann@dkfz-heidelberg.de;
sequenced by Qiagen (Hilden/Germany) within the cDNA sequencing
consortium of the German Genome Project.

No s1 sequence available.

This clone (DKPZP781C0629) is available at the RZPD in Berlin.

Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059

Zorn.

cDNA was oligo dT primed from 5ug of poly A+ RNA from egg.

ECORI-NotI cut cDNA was then ligated into pCS107 with ECORI at the 3' end and NotI at the 3' end.

Vector: pCS107; Site 1: ECORI; Site_2: NotI

Host: Escherichia coli XLI-blue.
